> How to use this guide

Sections marked **Coach only** are for the person running the squad. Sections marked **For parents & swimmers** are for family accounts. Everyone can read everything — but feel free to skip the parts that aren't for you. Every screen, label and rule below matches the live app.

1 · What Swim Tracker is

A coach's logbook that turns race times into a clear read on every swimmer.

Swim Tracker replaces the coach's spreadsheet. You log each race time once, and the app works out every swimmer's **personal bests**, how they're **progressing** over the season, and how close they are to the **qualifying standards** — automatically, and always by the correct rules.

Personal bests

The fastest time each swimmer has ever raced, per event and pool length.

Progression

Every logged swim on a chart, so you can see the trajectory at a glance.

Readiness

How far each swimmer is from the next L2, L3 or SANJ cut for their age.

It answers three questions instantly

1. **What's the PB?** — the swimmer's best time for an event, and when it was set.
2. **How do they compare?** — how swimmers stack up in the same event.
3. **Are they improving?** — how a swimmer (or a whole squad) has progressed over time.

The three qualifying standards

Times are measured against three official tiers. They run **hardest to easiest**:

SANJ

Hardest

The top cut — the fastest time to reach.

L3

Middle

Level 3 — the next step up from entry.

L2

Entry

Level 2 — the first cut most swimmers chase.

★ Meet times only

A personal best is the fastest time from a real **meet**. Practice swims and time trials are logged and charted, but they never set a PB and never “qualify” you. This one rule keeps every number honest.

2 · Getting started

Creating your account and signing in — the same for coaches and parents.

Create your account

1. Open the app and choose **Create one** (under the sign-in box) to reach **Create account**.
2. Enter your **Name**, **Email** and a **Password**, then press **Create account**.
3. You're taken straight into the app — no email confirmation step to wait for.

Sign in again later

1. Go to **Sign in**, enter your **Email** and **Password**, press **Sign in**.
2. Wrong details show "*Invalid email or password.*" — just try again.
3. Sign out any time from the bottom of the sidebar (**Sign out**).

What you land on depends on your role

Coach

You arrive on the **Dashboard** — your squad at a glance, with a big **Log a time** button.

Viewer

You arrive on **My swimmers** — the swimmer(s) you're allowed to follow, ready to open.

> Who becomes a coach?

New accounts start as a **viewer** (read-only). A coach account is set up for you by the club. If you followed a coach **invite link**, signing up shows a banner — "*You've been invited to coach [club]*" — and your coach role is applied automatically once you're in.

3 · Roles — who can do what

Swim Tracker has two everyday roles. Here's the difference at a glance.

CAN THEY...	COACH	VIEWER (swimmer / parent)
See their own swimmer's times & history	✓	✓
See every swimmer in the club	✓	—
Log & edit race times	✓	—
Add, edit or deactivate swimmers	✓	—
Create squads & manage members	✓	—
Compare swimmers, status matrix, season ranking	✓	own
Road to qualify, progression, stroke profile	✓	own
View the qualifying standards	✓	✓
Edit the qualifying standards	—*	—
Invite a parent/swimmer to follow a swimmer	✓	—

"own" = only for the swimmer(s) that account is linked to. * Standards are maintained centrally by the system's super-user; coaches see them read-only (see §8).

Coach

Runs the squad. Edits swimmers in their own club, logs times, and reads how *everyone* compares so they can plan. Poolside on a phone is a first-class use.

Viewer

Follows their own swimmer. A parent or swimmer, read-only. They only ever see the name, times and history of the swimmer(s) a coach has linked them to — never another family's data.

> Enforced, not just hidden

A viewer can't reach another swimmer's data even by guessing the web address. Access is checked on the server for every single screen — the app only hides what it also refuses to serve.

4 · Viewing access & permissions

How a parent or swimmer gets connected to the right swimmer — two easy paths.

Coach Invite a viewer by email

1. Open the swimmer, go to the **Access** tab → **Viewer access** (or add emails when first creating the swimmer).
2. Type the parent's or swimmer's **email** and press **Add viewer**.
3. The app **emails them a sign-up link**. Share that link however suits your club — email, WhatsApp, a text.
4. Already have an account? They're linked immediately. New? Access **binds automatically when they sign up**.

Pending invites are listed with a clock icon ("*Invited · access on sign-up*") and can be withdrawn any time.

Viewer Or, request access yourself

1. On **My swimmers**, choose **Find a swimmer**.
2. Search by name, find your swimmer, and press **Request access**.
3. You'll see "*Request sent ... their coach will approve it.*"
4. The coach approves it on the swimmer's **Access** tab, and your swimmer appears.

The search shows names only — never times or history — purely so you can ask for the right swimmer.

You land right on your swimmer

Once linked, a parent/swimmer opens straight into **My swimmers**. Everything is **read-only** (a small "Read-only" tag confirms it), and you only ever see your own linked swimmer(s).

More than one swimmer? Here's how to switch

If you're linked to several children, there's no single switch — you pick per screen: **1)** On **My swimmers**, click a name to open that child's profile. **2)** On a chart with a **Swimmer** picker (Progression, Road to qualify, Stroke profile), choose the child there. **3)** On group screens (Comparison, Status matrix, Season improvement), all your children appear together automatically.

5 · Finding your way around

One sidebar on the left, grouped into tidy sections. What you see depends on your role.

Same shape, fewer keys

The viewer sidebar mirrors the coach's, minus the parts that *edit*: no **Dashboard**, no **Roster**, **Squads** or **Log a time**.

- **Swimmers** — the roster, squads, and logging a time.
- **Performance** — the analysis charts.
- **Qualifying** — readiness against the cuts.

Every page also carries a **breadcrumb** up top (e.g. *Dashboard / Roster / Jane Doe*) so you always know where you are.

💧 On a phone

The sidebar tucks away behind a menu button, and slides in when you tap it. Collapse it on a laptop with the **Collapse** control at the bottom — the icons stay, and each group opens on hover.

6 · The charts, explained

Every analysis screen — what it shows, why it helps, and how to drive it. Part 1 of 3.

Status matrix [Qualifying → Status matrix](#)

What it shows. A big grid: one **row per swimmer**, one **column per event**. Each cell shows the **hardest tier** that swimmer has met, and a hint of the **gap to the next tier up**. It's the coach's "who's ready for what" planning board.

How to drive it. Behind **Filters**: **Gender** (All / Female / Male), **Age band**, and **Squad** (coaches only). Cells read: a tier badge, "▼" + a time (to the next tier), "✓ top" (hardest tier met), "—" (no meet time yet), or "." (no cut for that event).

SWIMMER	100 FREE	100 BACK	200 FREE
Rutendo N.	L3	L2	—
Tadiwa N.	SANJ	L3	L2
Kuda F.	L2	.	L2
	SANJ	L3	L2

— no meet time · · no cut

Road to qualify [Qualifying → Road to qualify](#)

What it shows. For **one swimmer**, the gap from their best meet time to each qualifying cut, **closest first** — so the easy wins jump out.

How to drive it. Pick a **Swimmer**, then a **Target tier**: L2 · L3 · SANJ · All. Pick one tier for a focused "how close to *this* cut" view; pick **All** to see every event on one shared scale, coloured by the highest tier met.

- **Gap to the cut** — a bar per event; shorter = closer. Shows "PB → cut" and the gap in seconds and %.
- **Qualifying progress** — a bar that fills toward the cut; full green = **Qualified**.
- Already-qualified events group together; events with no time show as "no time yet".

Gap to the cut · shorter = closer

6 · The charts, explained

Part 2 of 3 — the trajectory and the leaderboard.

Progression Performance → Progression

What it shows. Every logged time for one swimmer (or a group) plotted over the season. **Faster times sit lower**, so improvement reads as a descent toward the cut.

How to read the dots. Filled = **meet**, hollow = **trial / practice**, ringed = **personal best**. Dashed coloured lines are the **qualifying cuts** for the swimmer's exact age — a dot dropping below a line means qualified for that tier.

Controls. **One swimmer / Group**, a **Swimmer** picker, and the event (**Distance · Stroke · Course**). Coaches can switch to **Projection** to extend the recent trend toward a target cut — always labelled "*Estimate only*", never a promise.

Comparison Performance → Comparison

What it shows. Ranks swimmers on **one event and course** by their fastest meet time — a bar chart plus a sortable leaderboard, fastest first. **Shorter bar = faster.**

How to drive it. Choose the event (**Distance · Stroke · Course** — a course is required, since short- and long-course times are never ranked together). Behind **Filters**: **Gender** and **Age**. When one age + gender are pinned, the L2/L3/SANJ cuts appear as vertical lines.

> One toolbar, everywhere

Every chart page leads with the same slim toolbar: the main selectors inline, and a **Filters** popover (with a little count badge) for the rest. The event picker is always **Distance · Stroke · Course**.

6 · The charts, explained

Part 3 of 3 — the wheel, the season board, and the PB board.

Stroke profile wheel [Performance → Stroke profile](#)

What it shows. A radial wheel: one bar per event, grouped into **coloured stroke arcs**. Each bar sits on that event's own L2→L3→SANJ scale, and **further out = faster** — a bar reaching past a ring beat that cut. The three dashed grey rings are the L2, L3 and SANJ cuts.

How to drive it. Pick up to **4 swimmers** to place on the same scale (great for comparing, or picking a relay). Toggle **Full coverage / Include partial** to add events that only have some cuts. Hover a bar for the PB and every cut. Colour = **stroke** only.

Season improvement [Performance → Season improvement](#)

Ranks swimmers by the **time they've dropped this season** — either for one event (**By event**) or averaged across all events (**Overall**). Longer bar = more time dropped. Swimmers with only one meet time this season show under "Insufficient data", never as 0%.

The PB board [On each swimmer's profile](#)

A grid of **events x course** — **Long course (LCM)** and **Short course (SCM)** kept separate. Each cell shows the headline PB, the date, and the meet. "No meet time yet" means only trials/practice exist so far.

The golden thread

Across every one of these screens, only **meet** times count, and cuts always match the swimmer's **exact age** on the long-course scale. Learn that once and every screen reads the same way.

7 • Key concepts

A short glossary. Learn these five and the whole app clicks into place.

Personal best (PB)	The fastest meet time a swimmer has raced in an event. Time trials and practice are logged and charted, but never set a PB.
Short vs long course	SCM is a 25 m pool; LCM is a 50 m pool. Times are kept completely separate — an SCM best and an LCM best are different records and are never compared.
The three standards	SANJ , Level 3 (L3) and Level 2 (L2) are the qualifying tiers. Order of difficulty: SANJ is hardest , then L3, then L2 (entry).
“Qualified”	A swimmer’s best long-course meet time is at or under the cut for that event. Beat the cut = qualified for that tier.
Exact-age matching	Cuts are matched to a swimmer’s exact age (their single year), not a two-year band — so a 13-year-old is measured against the 13 cut.
Swim types	Every time is tagged Meet , Trial or Practice . Only Meet counts toward PBs and qualifying.

SANJ

Hardest

Fastest cut to reach

>

L3

Middle

Level 3

>

L2

Entry

Level 2

> A note on reading times

Times read **minutes : seconds . hundredths**. So **1:07.47** is one minute, 7.47 seconds; a time under a minute like **29.94** is just seconds. When you type a time in, the app shows exactly what it will save (e.g. “Saves as 1:07:47”).

8 · For coaches

Coach only

The day-to-day: logging times and looking after your roster. Part 1 of 2.

Log a time [Swimmers → Log a time](#)

1. Pick the **Swimmer** (each option shows their age).
2. Tap **Distance**, **Stroke** and **Course**. Impossible combinations are greyed out, never hidden.
3. Type the **Time** on the keypad — digits fill from the right (hundredths → seconds → minutes). Backspace removes the last digit. The line below confirms “Saves as ...”.
4. Set the **Type** (Meet / Trial / Practice), **Date**, and optional **Meet / venue** and **Notes**.
5. Press **Save time**. The form keeps the swimmer, event, meet and date so a whole heat flies by.

Recent saves appear under “Logged this session”, each with a trash button to undo a slip.

Time

1:07:47

✓ Saves as 1:07:47

1	2	3
4	5	6
7	8	9
⌫	0	C
Meet	Trial	Practice

Swimmers & the roster [Swimmers → Roster](#)

Add swimmer opens a panel for **Full name**, **Date of birth** (used for exact-age cuts), **Gender**, optional **Notes**, and an optional **Viewer access** email or two to invite family right away. The roster lists everyone with age, squads and status; the “...” menu lets you **Edit** or **Deactivate** (history is kept — deactivated swimmers just drop off the default list).

You edit your own club

You can **see** every swimmer in the system (so comparisons work), but you can only **edit** swimmers in your own club. Other clubs’ rows show as read-only — that’s how several clubs share one app safely.

8 · For coaches

Coach only

Part 2 of 2 — squads, the standards, and inviting families.

Squads [Swimmers → Squads](#)

Group swimmers for comparison and tracking. **New squad** asks for a name and optional description. Open **Manage members** to add or remove swimmers — a swimmer can be in more than one squad, and removing them from a squad never touches their times or other squads.

Standards [Qualifying → Standards](#)

This is the reference table of qualifying cuts that drives every chart — shown as an **age x tier** grid you can browse by **gender**, **tier** and **event**. A warning marker flags any younger-age cut that looks faster than an older one (a likely typo).

> View-only for coaches

The standards are maintained centrally by the system's super-user, so on your account this screen is **read-only** — *"View-only — the super-user maintains these"*. If a cut looks wrong, flag it to whoever manages standards for your federation.

Inviting parents & swimmers

On a swimmer's **Access** tab, add a viewer by **email** — they get a sign-up link and are linked when they join (or straight away if they already have an account). You'll also see incoming **access requests** here (from parents who found the swimmer themselves) — just **Approve** or dismiss. A badge on the Access tab tells you when a request is waiting.

9 · For parents & swimmers

For parents & swimmers

What you'll see, and how to read your own progress. Everything here is read-only.

You see the same clean charts the coach uses — just focused on your own swimmer(s). Start on **My swimmers**, open your swimmer, and explore from the sidebar.

Your swimmer's profile

Their **personal bests** (fastest meet time per event and pool), an **improvement** summary, the **progression** chart, and full **history** you can filter and sort.

Road to qualify

The clearest “how close are we?” view — each event's gap to the next L2, L3 or SANJ cut, closest first, with a bar that fills up as they approach the cut.

Stroke profile

A one-glance picture of strong and weak strokes — bars reaching further out are closer to (or past) the cut.

Progression

Every swim over the season. Remember: **lower is faster**, and a dot dropping below a dashed line means that cut is beaten.

How to read your progress in ten seconds

1. **Are the dots trending down?** Down = getting faster. That's the whole game.
2. **Which dashed lines have you crossed?** Below L2 = qualified L2, and so on up to SANJ.
3. **What's closest on Road to qualify?** The top bar is your next realistic cut.

Only your swimmer

You'll never see other families' names or times. If you have more than one child, flip between them from **My swimmers** or the per-chart **Swimmer** picker (see §4). When a best time clears a cut, you'll get a little celebration — that swim officially **qualified**.

10 • Try it out

Explore with these demo accounts before rolling it out to your club.

Viewer

2 swimmers

Nhimura family

EMAIL

nhimuraparent@viewer.com

PASSWORD

[password provided separately]

Great for seeing how a parent **switches between two swimmers**.

Viewer

1 swimmer

Fayayo family

EMAIL

fayayoparent@viewer.com

PASSWORD

[password provided separately]

Shows the **single-swimmer** view — no picker, straight to the swimmer.

Try this walk-through

Sign in as the **Nhimura** viewer → open **My swimmers** → pick a swimmer → open **Road to qualify** and switch the target tier between **L2 / L3 / SANJ / All**. Then open **Stroke profile** to see the wheel.

That's the whole app.

Log meet times, and Swim Tracker keeps the personal bests, the trajectory, and the road to every cut up to date for you — by the right rules, every time. Coaches plan from it; swimmers and parents watch the dots fall. Happy swimming.

SANJ
